AquaSoft Pro Plus

A Single System Used to Effectively Treat Residential Water

- Removes hardness
- Softens household water using minimal salt and water

Installed and serviced by your local hometown McDermott dealer, AquaSoft Pro Plus® water conditioners deliver the clear, soft water you want and need. The system's turbulator assures the high capacity resin media is kept clean, regardless of whether you have hard municipal water or extremely hard well water.

- Uses proven, high flow Autotrol 268 valve — ideal for households and businesses with larger water demands, minimizes pressure drops
- Available with Logix time clock or on-demand (metered) controller
- Efficient valve design decreases water required for each regeneration
- Noryl™ control valve is glass reinforced for exceptional strength and durability
- Unique valve design eliminates the need for dynamic seals that could cause leakage through wear or fatigue
- Protective black polyethylene tank jacket provides a high quality appliance finish
- Brine tank includes salt grid to prevent bridging, and brine well and safety float valve to minimize the possibility of overflow

McDermott AquaSoft Pro Plus Softeners

Logix Series 740 Time Clock

- Simple, economic electronic time clock operation
- Efficient 7-cycle regeneration sequence
- Power backup will maintain settings during a power outage
- Manual regeneration override provides more soft water exactly when you need it
- Safe, low voltage operation

Logix Series 760 On-Demand

- Simple, economic electronic on-demand (metered) operation
- Smart 28 day variable reserve feature learns your family's water usage and adjusts to demand
- Meters water usage and regenerates only when needed
- Features "soft water remaining" display
- Efficient 7-cycle regeneration sequence
- No battery backup required
- Safe, low voltage operation

Special Turbulator ...

The AquaSoft Pro turbulator utilizes a water/stream/compression system that stirs up the resin bed with each regeneration. The resin media are propelled at high speeds to the top of the mineral bed, then settle back down to the bottom. During this process, each bead is rubbed and polished against others, and the small particles of dirt and iron are scrubbed from the beads and flow down to drain.

Smart Control Valve ...

Advanced — Easy-to-read digital lettering clearly spells out all commands and functions.

Powerful — The Logix Series 760 system regenerations are automatically activated according to actual water consumption and patterns.

Intelligent — Advanced history screens inform you of gallons used each day and total number of gallons used over the lifetime of the unit.

Experienced Company ...

For over 60 years, the water system experts at McDermott's have been supplying Wisconsin and Upper Michigan homes with the finest in water supply and water treatment equipment. Through these years, our partner has been your hometown plumber and water treatment dealer.
